

Unlock Your Event Data!

Remove Operational Friction Using Process Mining

prof.dr.ir. Wil van der Aalst
 RWTH Aachen University
 W: vdaalst.com T:@wvdaalst

A few words about Wil van der Aalst

With Anja Karliczek, German Minister of Education and Research

Welcome

Wil van der Aalst

The Godfather of Process Mining joins Celonis as **Chief Scientist**

About Wil

- **Approx. 22 PhDs and postdocs (next to me).**
- **3 support staff and approx. 4 affiliated researchers)**
- **Tools: ProM, PM4Py, Stand-alone (e.g., Cortado),
Knime, RapidMiner, Celonis.**

discovering models from event data	discovery	object-centric	object-centric process mining, multi-event logs, etc.
conformance checking and comparative process mining	conf./comp.	stoch./uncert.	stochastic process models, dealing with uncertainty in data
forward looking: prediction and simulation	pred./sim.	aggr./abstr.	multi-level process mining, abstraction, aggregation, LPMs, etc.
action-oriented process mining, planning, automated changes	act./plan./cha.	fairn./conf.	responsible data science, including fairness, causality, confidentiality

RWTH Center for Artificial Intelligence

www.ai.rwth-aachen.de

- **75+ groups distributed over:**

- AI Methods
- AI Enabling Technologies
- Domain Specific AI
- Ethical, Legal, Societal, and Economic Aspects

- **Activities:**

- Larger consortium projects (e.g., NHR4CES)
- Participation in networks (e.g., Claire)
- Organization of events (e.g., KI Woche)
- Several colloquium series
- Developing teaching material
- Industry collaboration

UNIVERSITY

Machine Learning =
Learning based on examples
without being programmed.

**Supervised and
Unsupervised**

input

output

**Neural networks: First a failure
now the dominating paradigm**

**Focus on specific tasks
(speech, images, etc.).**

How about managing and improving operational processes?

We need process models that are understandable!

We are interested in improving end-to-end performance and compliance (not a single task)!

We do not have labeled data, we have SAP, Salesforce, Oracle, Microsoft, Infor, etc. (holding thousands of tables)!

Process mining in 10 minutes

Using the whole event log

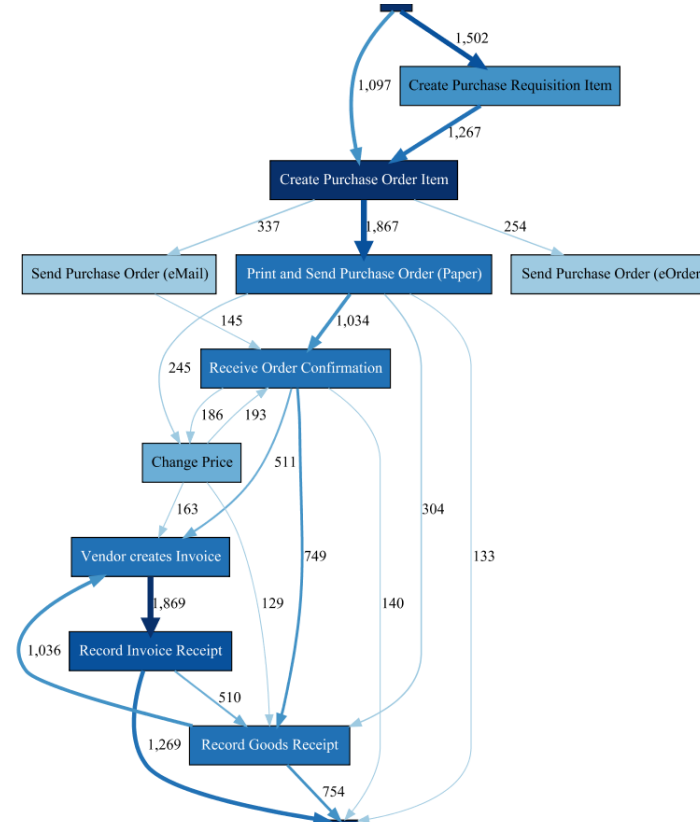

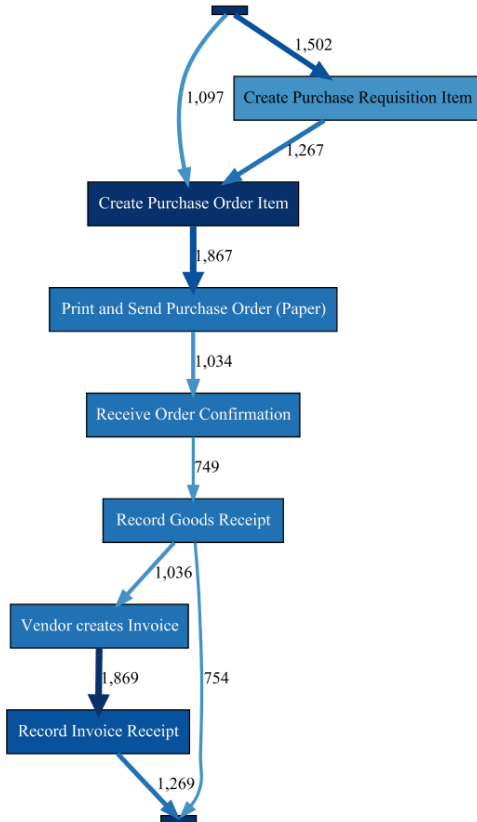

No modeling needed!

Performance and Compliance

Reality is not so simple

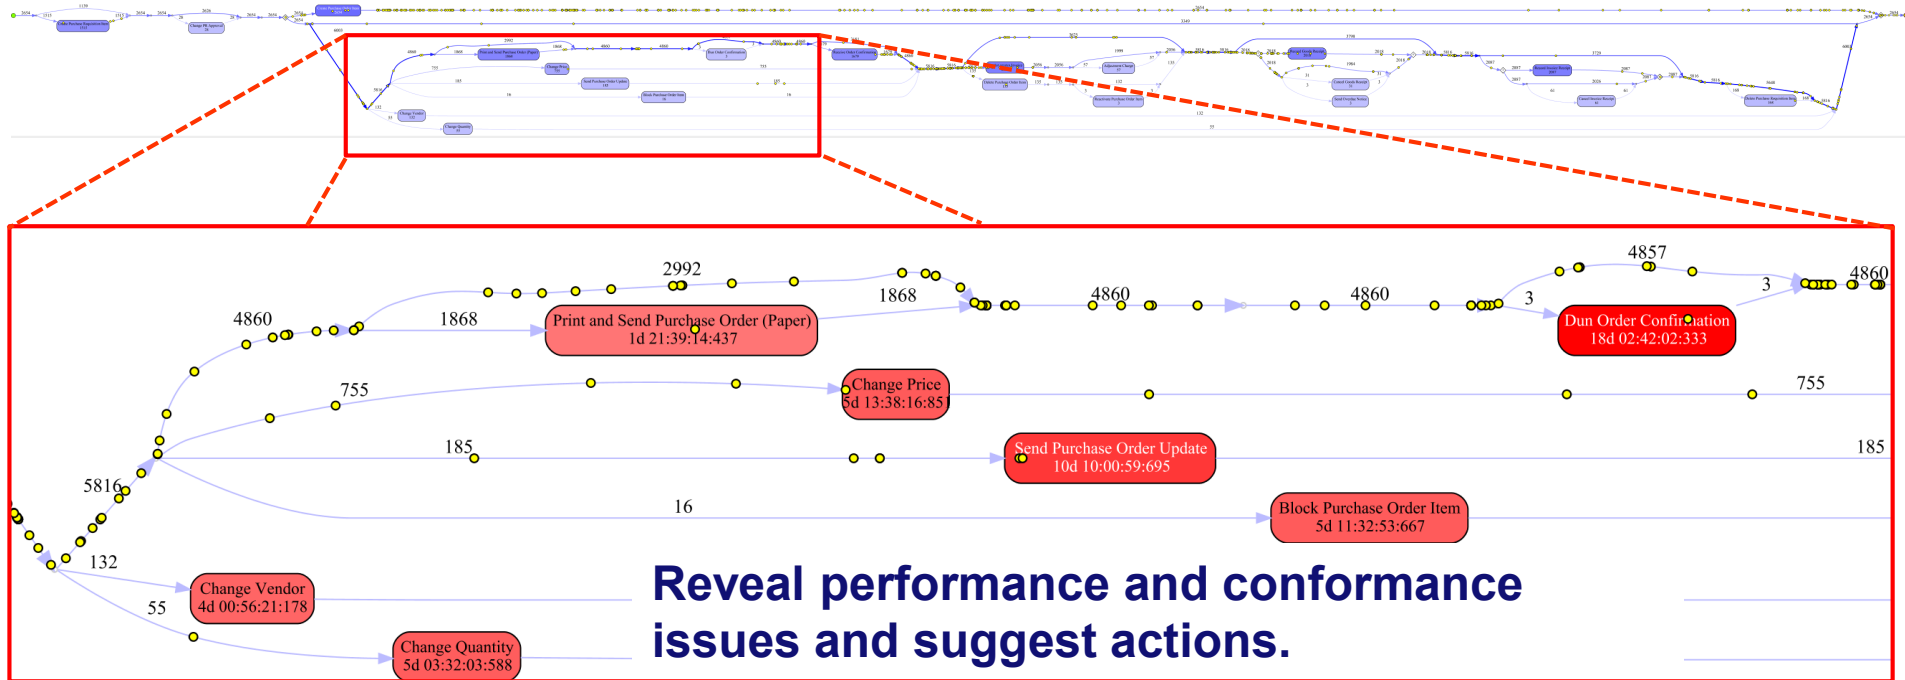

Reality is not so simple

It is common to find thousands of different variants for simple core processes like P2P and O2C!

Caused by hand-offs, rework, duplication, ineffective communication, etc.

Process mining helps organizations to address compliance and performance problems

Bewertung übersteigt zehn Milliarden Dollar: Münchener Start-up Celonis ist erstes deutsches Decacorn

Der Anbieter für Unternehmenssoftware sammelt eine Milliarde Dollar ein. Ein neuer, berühmter Investor nährt Spekulationen auf einen baldigen Börsengang.

WIL VAN DER AALST

Deutschlands wertvollstes Start-up Celonis verpflichtet Spitzenforscher

Auf seiner Forschung bauen Dutzende junge Tech-Firmen ihr Geschäftsmodell auf. Jetzt will der Wissenschaftler seine Process-Mining-Ideen selbst in die Anwendung bringen.

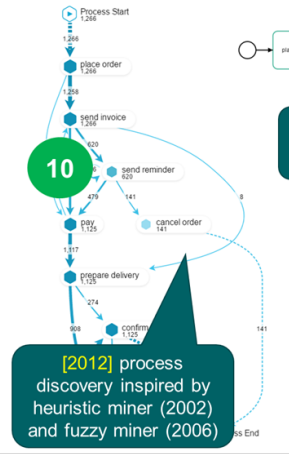

Larissa Holzi

A Decacorn is a startup company valued at over \$10 billion

Example Process Mining Software: Celonis

KPIs for violating vs. conforming cases

Throughput time	24.2 vs 24.4 Days	Steps per case	6.5 vs 6.4
Violations decrease throughput time by 0.2 Days		Violations increase steps per case by 0.1	

Violations

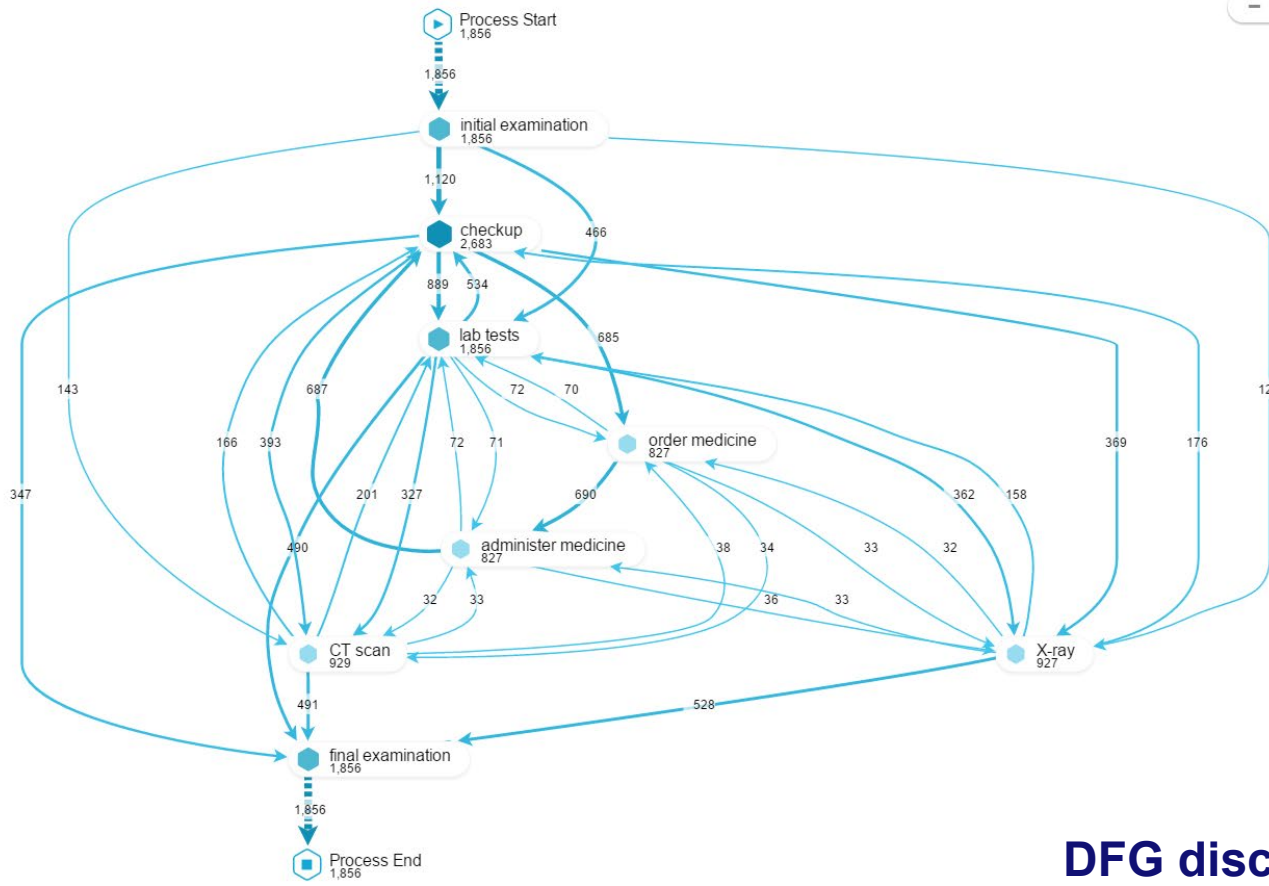

58% of cases	prepare delivery is followed by confirm payment	Effect on throughput time	-0.2 Days shorter
1% of cases	prepare order is followed by pay	Effect on throughput time	+0.8 Days per case

[2017] process-based root cause analysis (2006)

[2017] token-based conformance checking (2005)

[2013] token animation and sliders (2006)

- Germany's youngest most promising IT company (valued > 11 billion \$).
- Successfully adopted many ideas from research a decade earlier.
- Combining analytics with actions.

Inductive mining

Conformance checking

If we don't discover at least \$10 million in trapped capacity, we'll donate \$100,000 to a good cause.

Many of the larger organizations in Europe are using process mining already (and we are just at the beginning!)

ELSEVIER

Example: Process Mining @ Siemens

- > 6000 active Celonis users (P2P, O2C, etc.)
- Millions of savings by reducing rework, process unification, etc.
- Improved reliability and responsiveness.
- At an amazing scale, e.g., Order to Cash (O2C) process with >30M cases, >300M events, and >900K variants.

Process Mining Offers Many Scientific Challenges (that also matter in the real world)

- 1** Finding, extracting, and transforming event data is still taking up to 80% of the time.
- 2** Most techniques focus on a single case notion (i.e., a single process), whereas problems may be caused by interacting or competing processes.
- 3** Process discovery is not a solved problem despite powerful techniques like inductive mining. Concurrency is hard to discover from event data that provide only a sample.
- 4** There is a need to better integrate mining and modeling (e.g., user-guided discovery).
- 5** Conformance checking is time-consuming and diagnostics tend to be non-deterministic.
- 6** There is a need for techniques recommending process changes (i.e., moving beyond diagnostics).
- 7** Machine Learning (ML) techniques tend to perform poorly because essential aspects are missed (e.g., system load).
- 8** Process mining results need to trigger automated actions (e.g., start a corrective workflow).

Detailed analysis of shoveling earth data

Frederick Winslow Taylor

F.W. Taylor. The Principles of Scientific Management. Harper and Bothers Publishers, New York, 1919.

Towards a Digital Twin of an Organization (DTO)

Examples: business process modeling, discrete event simulation, etc.

Towards a Digital Twin of an Organization (DTO)

Process mining is a key technology to create a digital shadow. 15 years ago we were already able to automatically create simulation models based on event data only!

Towards a Digital Twin of an Organization (DTO)

Towards a Digital Twin of an Organization (DTO)

Traditional process mining techniques and tools can create a digital shadow from event data.

To create a digital twin, process mining techniques need to be more forward looking. This includes:

- **Operational support**, including predictions and recommendations.
- **Action-oriented** process mining, triggering corrective workflows (Also see the Celonis Execution Management System.)
